SILKAN becomes the Primary Distributor in Europe for the VENOM™ UAV Total Training Solution Simulator

Paris, France - June 17th, 2014

SILKAN is proud and excited to announce that a Strategic Distribution Agreement has been signed today covering the sale of VENOM™, an innovative simulation solution in the field of real-time UAV (Unmanned Aerial Vehicle) Total Training Solution Simulators, and the agreement empowers SILKAN to offer VENOM™ in the European Union and North African markets.

VENOM™ is a full-featured solution that allows UAV Pilots and Payload Operators to jointly train in a physically-accurate virtual environment mitigating the risks and constraints of actual flight training operations. SILKAN, along with VENOM™ co-developers Roy Aircraft and Avionic Simulation, Inc (RAAS) and Legion Training and Simulation, LLC (LTS), represents a unique melding of complementary expertise, products and services that bring to the market a solution tuned to practical user needs. Based on SILKAN's generic high-performance infrastructure, the solution integrates RAAS' advanced Aerodynamic flight models, allowing for precise modeling of all aspects of UAS platforms, and high-fidelity, AI-driven mission-specific training scenarios developed by LTS.

VENOM™ simulates micro, small, medium and large UAV platforms used for surveillance missions, and includes various simulated sensor payload models. The VENOM™ solution is ideally suited for training Civil Security and Disaster Response forces to learn how to effectively integrate such a powerful asset into their operational procedures. With this new agreement, SILKAN becomes the unique VENOM™ reseller in the European and North African regions.

About SILKAN

SILKAN is the French Leader in Embedded Simulation, integrating first-rate Technologies in Simulation solutions to support the Design, Testing, Optimization and Use of Complex Systems. Our added value solutions are successfully addressing: Optimized Numerical Simulation solutions that reduce Time to Market, Innovative Test and Simulation capabilities that save overall costs, reduces delays and increases safety, and High Fidelity and cost-efficient solutions for training simulators. The SILKAN GROUP represents 78 employees, 9M€ of revenue in 2013, and worldwide locations: FRANCE (Headquartered in the Paris area), USA, and CANADA. The SILKAN GROUP is ISO 9001 certified. More information: www.silkan.com

About RAAS

RAAS provides expert Modeling, Simulation and Avionics test bed solutions for the civil and military aerospace markets. Engineering and consulting services provided by RAAS include development of aerodynamic models for aircraft and UAV simulations, aerodynamic models for the control of missile systems, hardware and software integration of flight simulator components and modules, development of modular testing environments for avionics systems, with support for DO-178B/C certification, and more.
